

FACELAND

YOUR BLOOMREACH ENGAGEMENT SANDBOX SUCCESS GUIDE

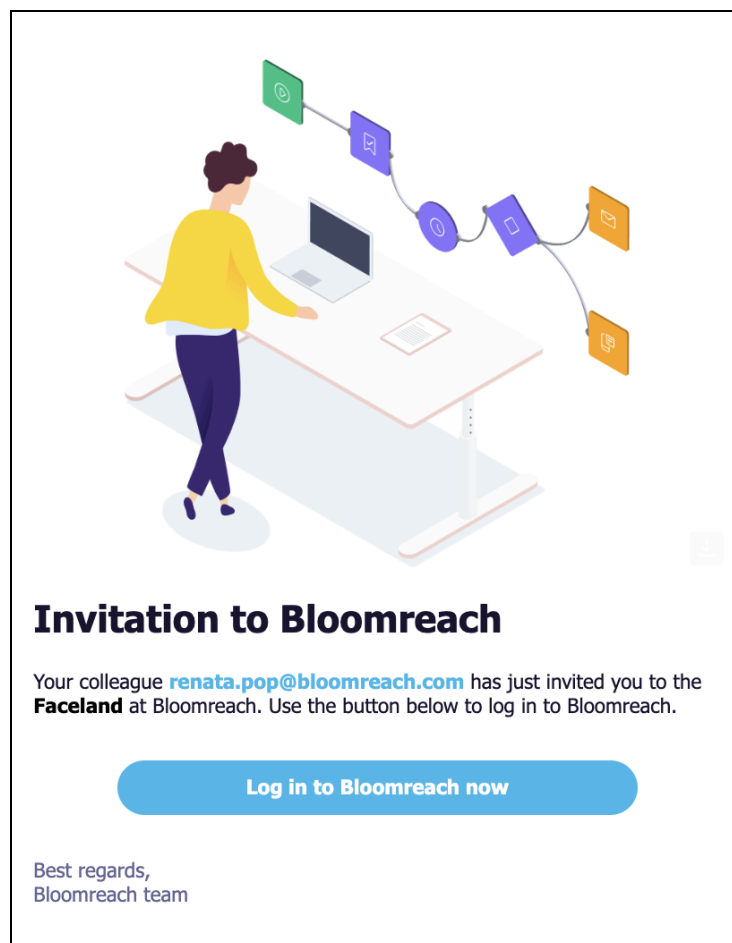

January 2026

Faceland Team,

Welcome to your **personalised Bloomreach Engagement sandbox!**

Whether this is your first look at the platform or you've attended a product demo, a great way to get comfortable is to experiment 😊

Be on the lookout for an invitation email from Bloomreach that will provide you with access to the Faceland sandbox project. It'll look like the screenshot below:

- When you receive the email, please register with your email address and password.

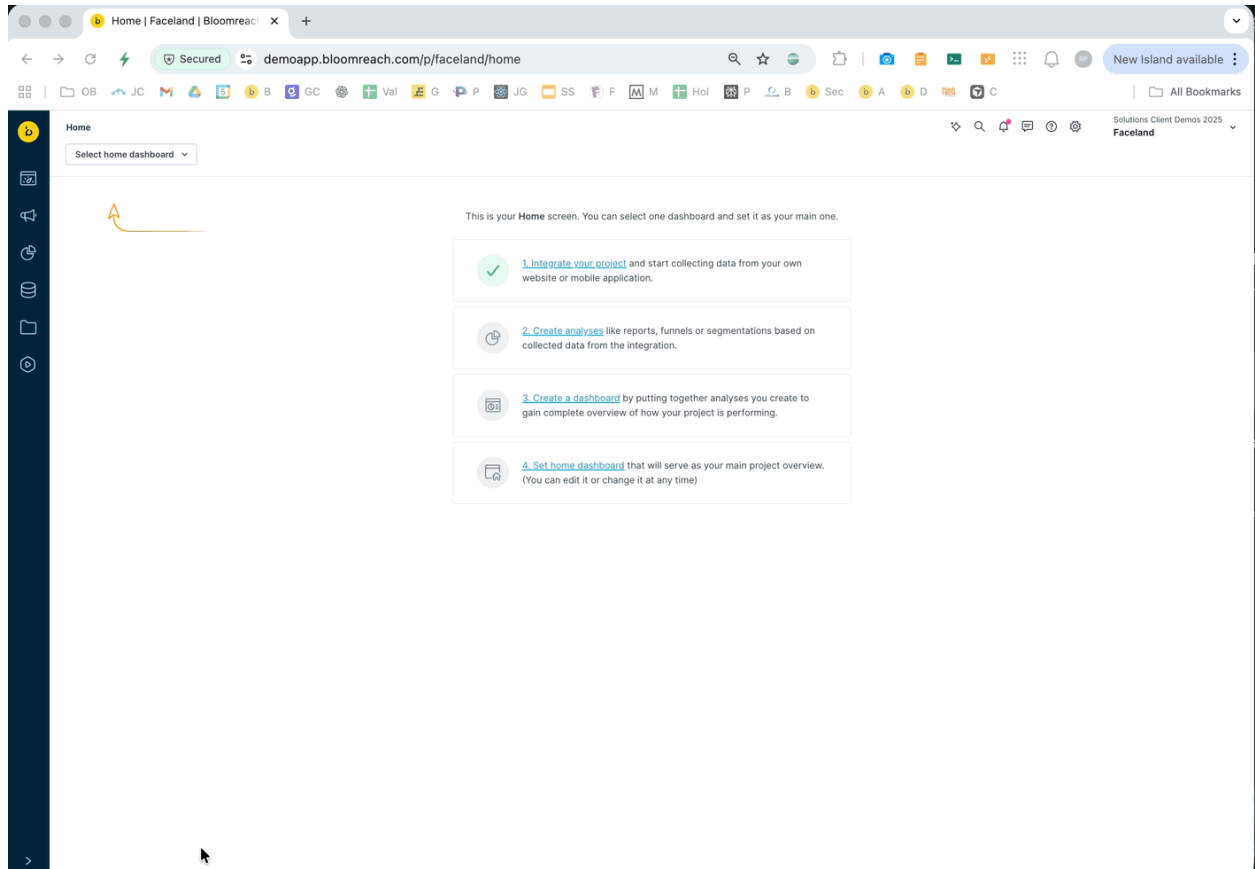

- Everyone invited will have edit privileges allowing access to all parts of the platform in this sandbox evaluation period. This is a single project called [Faceland](#)
- For background context, the project includes sample demo data. This dataset contains around 2,000 “Faceland” customers, generated to reflect common customer journeys (e.g. browsing the website, booking appointments) at different stages. The records are generally coherent, but as they are synthetic demo customers, their behaviour may not always appear perfectly “human”.

To get you started, here are a few use cases to help you familiarise yourself with the Engagement environment.

(Note: These use cases have been pre-built for you to easily replicate them in the platform. Just look for the items labeled with a  Faceland badge in your Bloomreach Engagement sandbox project)

1. Use Profiles:

- In the main navigation menu, go to Data & Assets -> Customers.
- This section allows you to:
 - o Search for individual customers
 - o Open detailed customer profiles
 - o View all customer attributes and activity

💡 As a reminder, in your day-to-day work you are unlikely to spend much time reviewing individual customer profiles. However, as you become more familiar with the setups and events, they can be very useful. Our demo returning customer profile was [Thomas Degroot](#) - **this will be the most complete profile we have added to the platform so feel free to use this as a reference.**

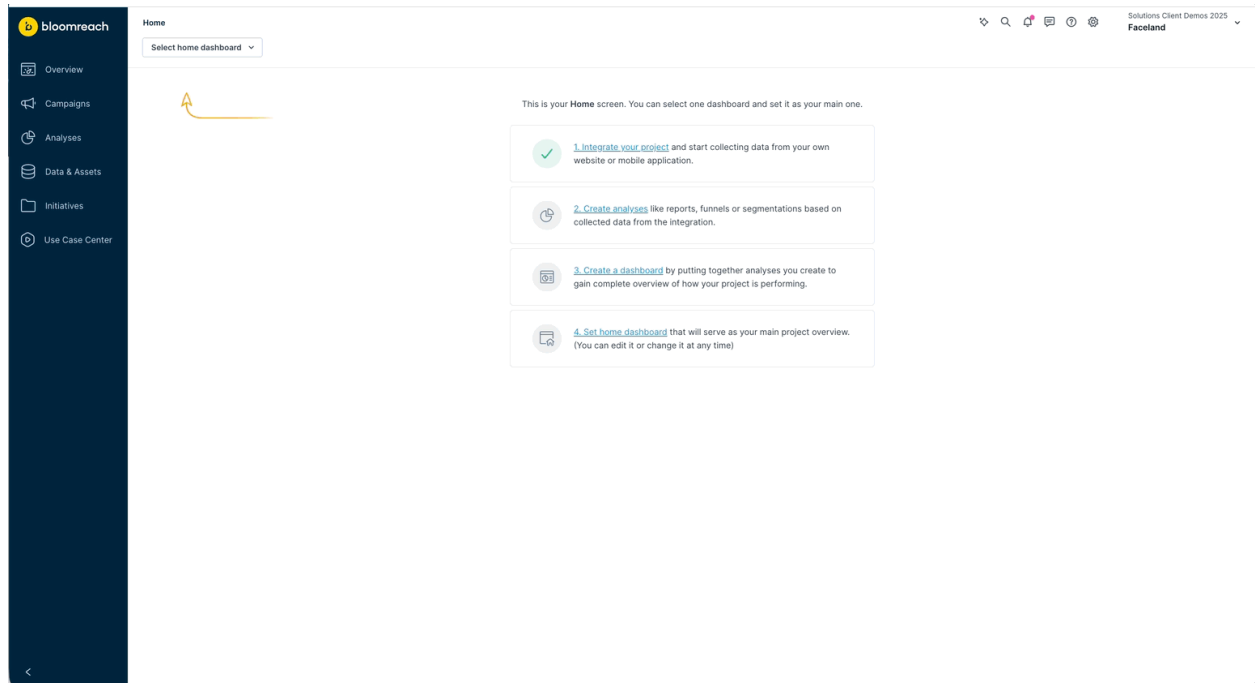

2. Aggregates

In the main navigation menu, go to **Data & Assets → Data Manager → Definitions → New definition → Aggregates.**

[Shortcut here!](#)

This section allows you to:

- Create new aggregates from customer or event data
- Define calculated values such as counts, sums, or timestamps
- Reuse aggregates across analyses, dashboards, and scenarios

💡 As a reminder, aggregates represent answers to our most common questions about customer behaviour. They allow us to select, via a natural-language picklist, the specific data point we are interested in. For example, the question *“What is the most recent treatment a customer has booked?”* is represented by the aggregate **last – treatment_booking – treatment_type**.

💡 Additional note:

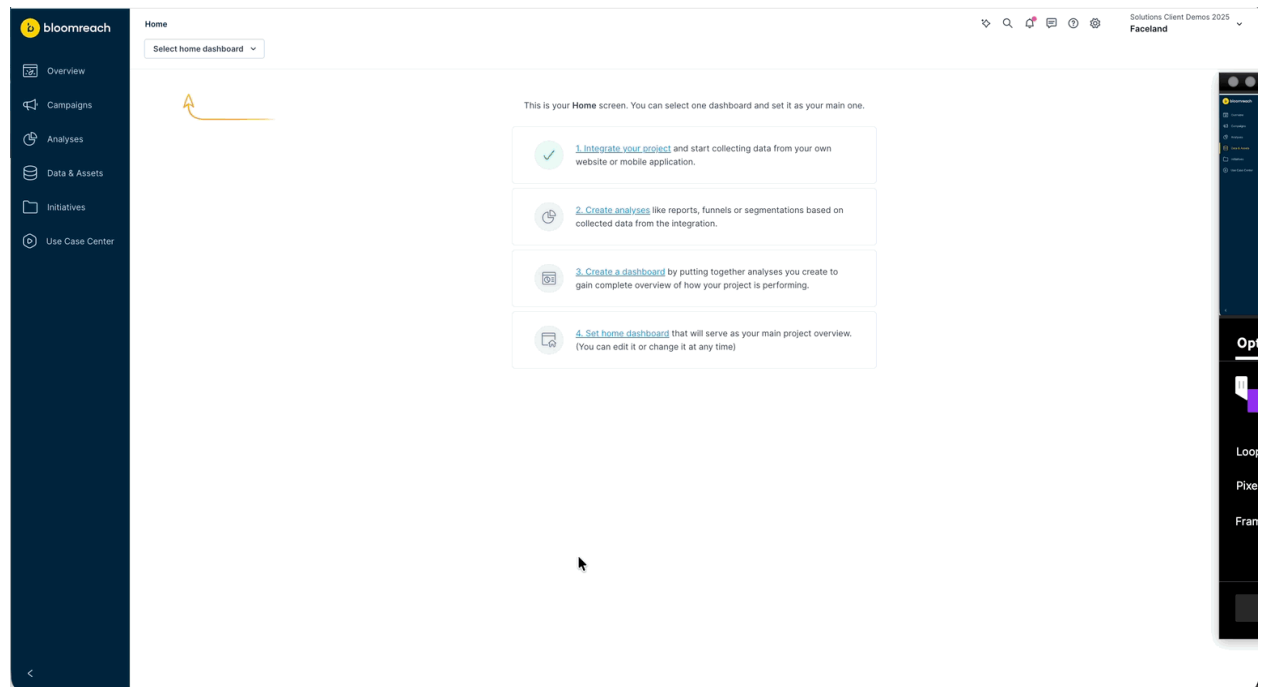

This will feel more intuitive with time, but it is perfectly fine to refer back to the events on the customer profile to confirm which data point you want to select. In the example below, we are looking at the treatment booking event and deciding what information we want to return.

If the goal is to retrieve the name of the treatment, the correct choice is **treatment type**. If, instead, we want to know *“Who did the customer most recently book a treatment with?”*, the aggregate would be **last – treatment_booking – specialist**.

● treatment_booking		21 May 2025, 17:05:00.000	^
appointment_date	2025-06-10T15:00:00		
booking_value	450		
clinic_location	Maastricht		
promotion_applied	loyalty_fillers		
specialist	Dr. Peters		
status	booked		
treatment_type	Jawline Fillers		

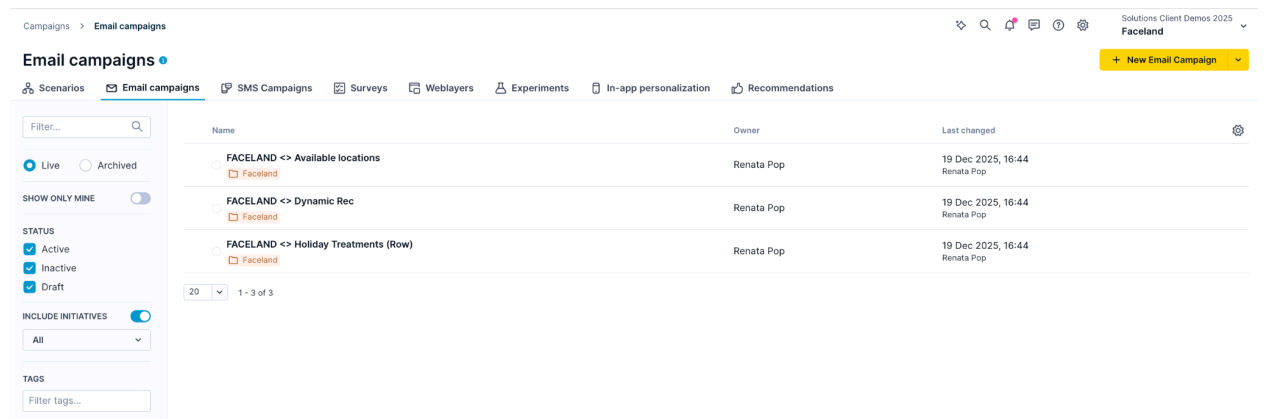

3. Asset creation

- In the left hand global menu bar, navigate to Data & Assets -> [Asset Manager](#).
- Explore the various email templates and custom rows and try to build one from scratch with the visual builder.
- In the visual builder, select the Rows tab option on the right hand panel in the editor and pick the Predefined to find the saved rows you can use in your templates.
- Easily drag and drop them into the workspace as needed.

💡 Note:

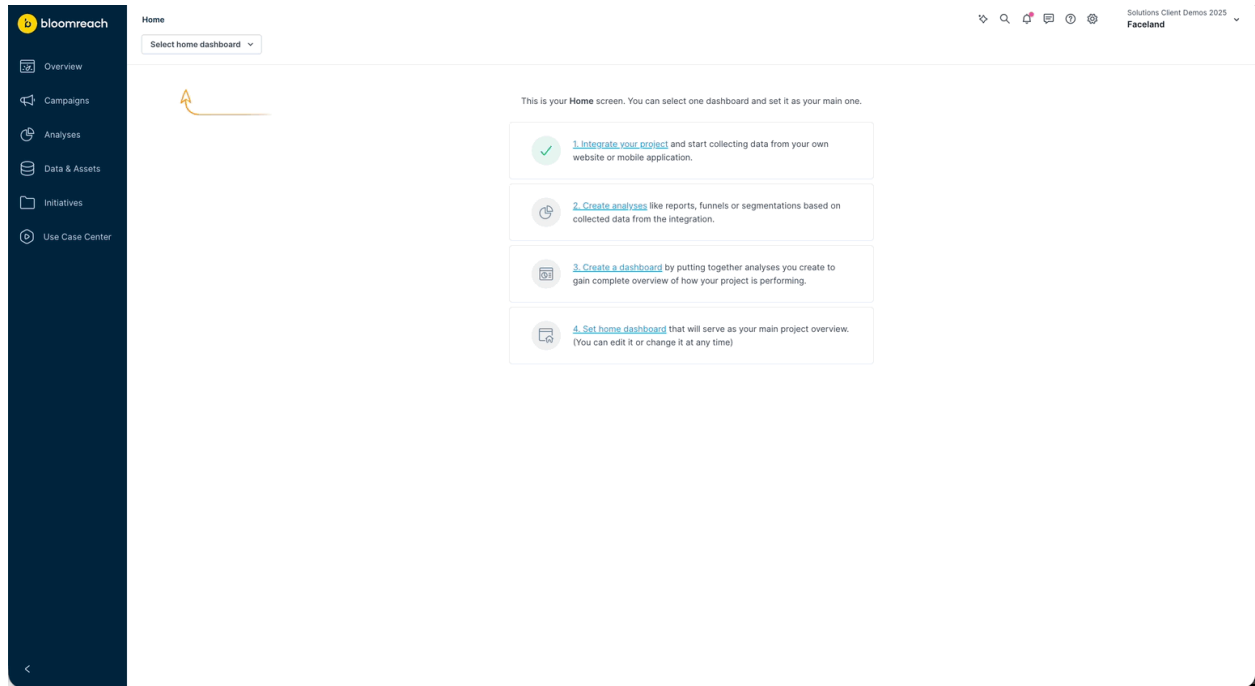

Here we are accessing our main template and editing it. To edit a one off email campaign, go to Campaigns - Email Campaigns. You'll find some additional examples of pre-build campaign here. ([Direct link](#))

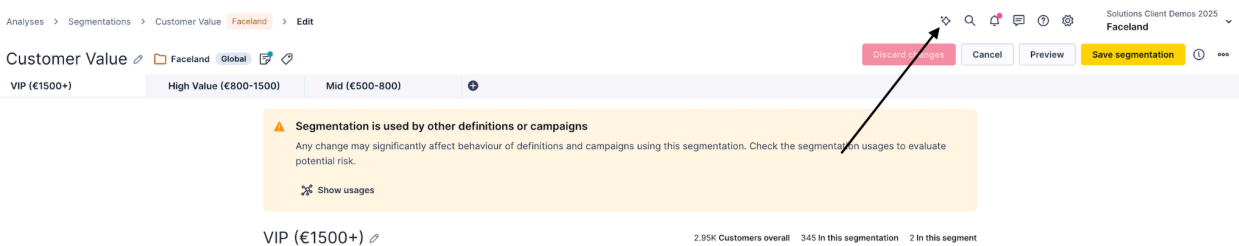

4. Create a segmentation

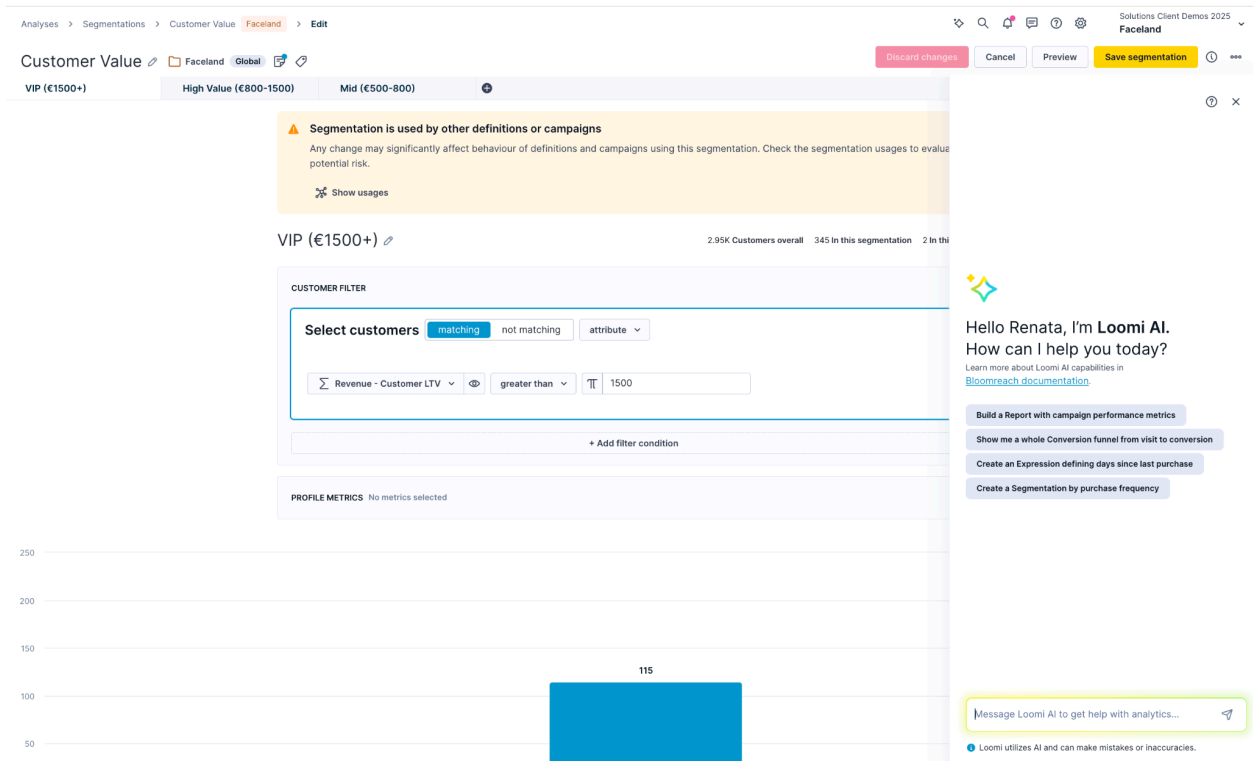

- In the menu bar, go to Analyses -> Segmentations. Open the pre-built segmentation 'Customer Value' (link [here](#))
- In the right-hand corner, click 'Edit'. This will show you how the segmentation is built
- The objective of this segmentation is to segment your customers in terms of their total spend. You can easily adjust filters to match your own criteria.

- Recreate this segmentation and feel free to try different thresholds & variations. [See here](#) for our detailed guide on building segmentations in Bloomreach Engagement

 Quick tip:
Loomi AI can build segments on your behalf.

5. Orchestrate a Welcome Flow journey

- In the menu bar, go to Campaigns -> Scenarios -> 'Conversion: Welcome Flow' (or click the link [here](#))
- Double click on the 'Welcome email' node to customize the content of your Email. You can also drag and drop a new 'Email' node and create from a template relevant for your campaign.
- Feel free to make changes to the campaign logic. For further guidance, see our documentation on [Scenarios](#) and [Email Campaigns](#).

TRIGGERS

- Now
- On date
- On date attribute
- Repeat
- On event
- API trigger

ACTIONS

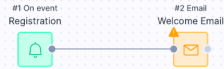

- Email
- Mobile push
- Browser push
- Webplayer **New**
- SMS
- RCS **New**
- WhatsApp

Ad Audiences

- Webhook
- App Inbox
- Other

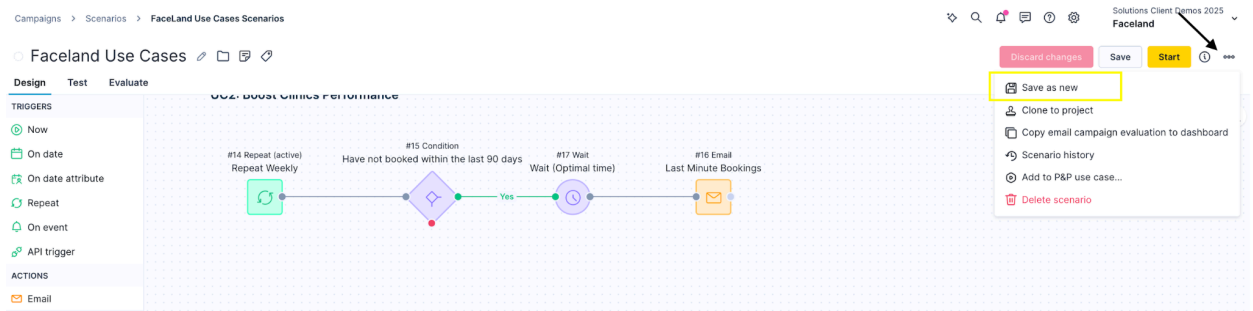

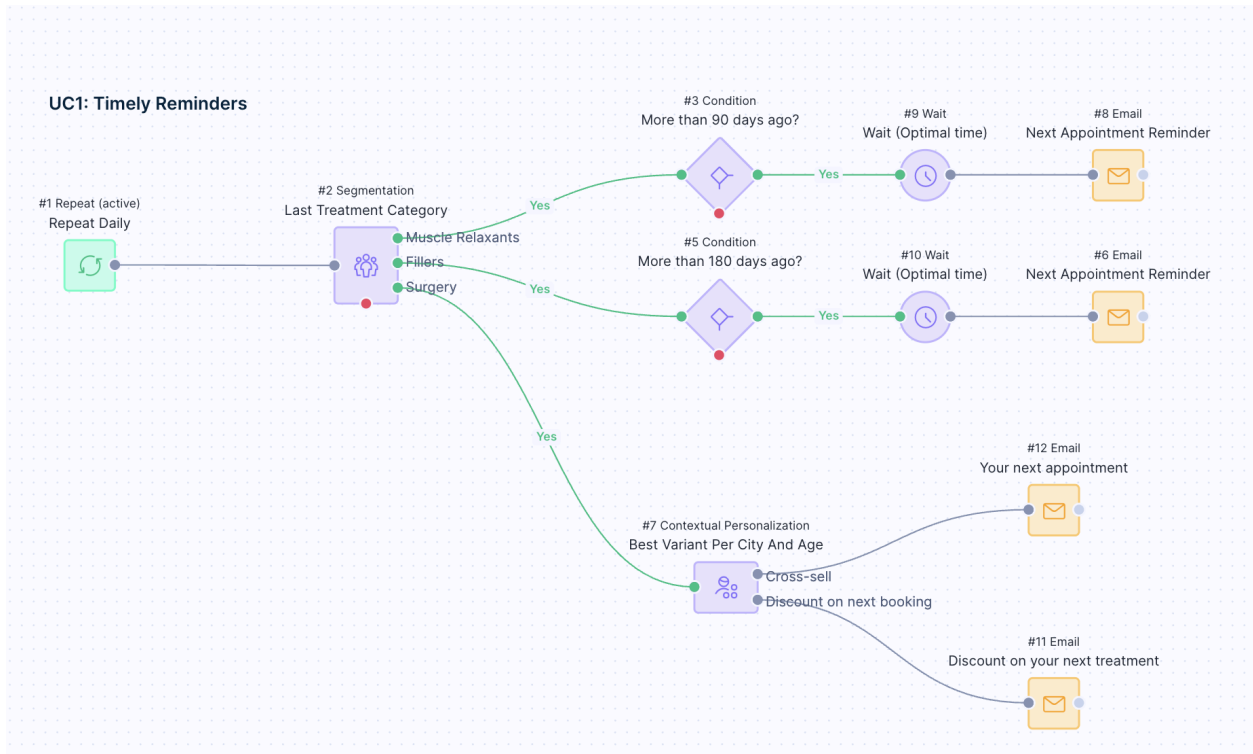

OPERATORS

- Condition
- Segmentation
- A/B test
- Contextual Personalization
- Customer limit
- Label
- Set attribute

💡 If you'd like to review the use case scenarios we've covered on the demo, please see the [Faceland Use Cases Scenario](#)

Here, we are applying additional logic to improve journeys such as optional time wait nodes. If you'd like to make any changes here you can easily duplicate this scenario by clicking on save as new.

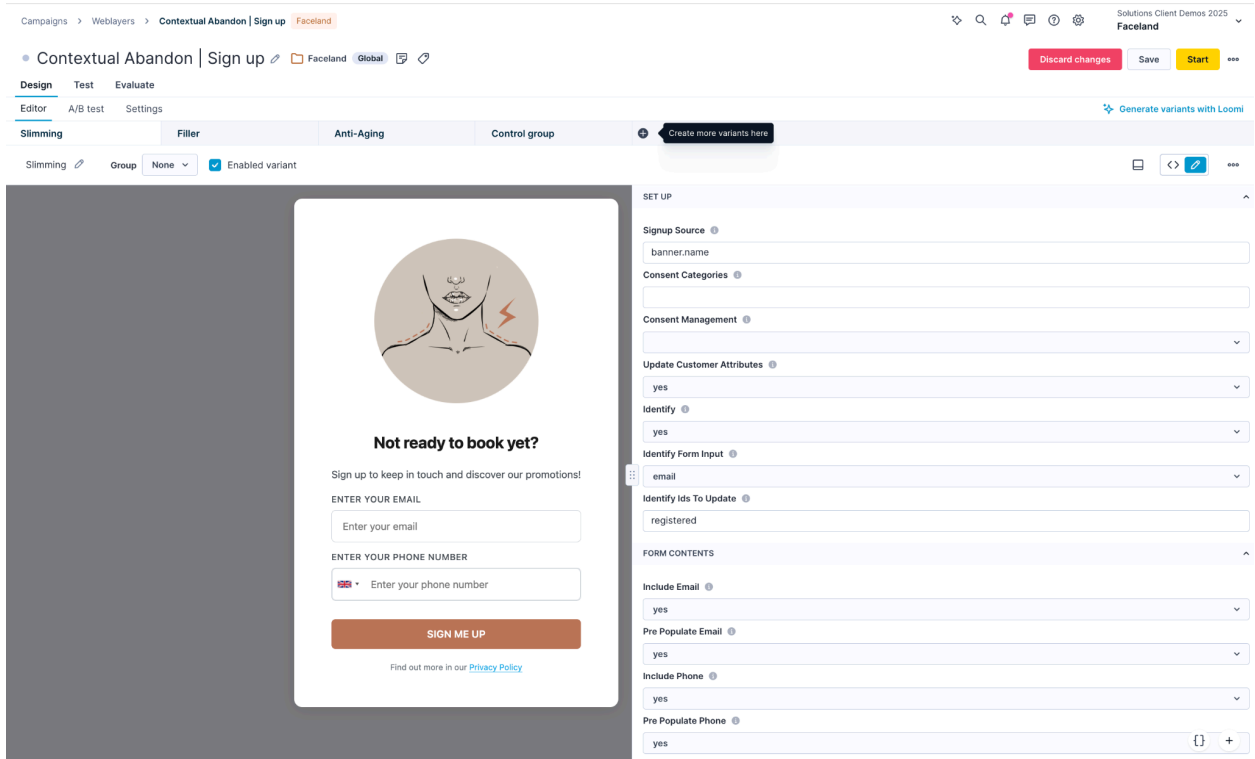

6. Weblayers

In the main navigation menu, go to **Data & Assets** → **Weblayers**.

This section allows you to:

- Create and manage weblayers for on-site campaigns
- Define targeting rules and display conditions
- Design visual overlays such as banners, pop-ups, and notifications

The screenshot displays the Bloomreach Faceland interface for creating a 'Sign up' form. The interface is divided into a design area on the left and a configuration panel on the right.

Design Area:

- Header:** Campaigns > Weblayers > Contextual Abandon | Sign up | Faceland
- Navigation:** Design (selected), Test, Evaluate
- Editor:** A/B test, Settings
- Form Structure:** Slimming (selected), Filler, Anti-Aging, Control group
- Group:** None (selected), Enabled variant (checked)
- Form Content:**
 - Image:** A circular illustration of a person's neck and shoulders with a lightning bolt.
 - Text:** "Not ready to book yet?"
 - Text:** "Sign up to keep in touch and discover our promotions!"
 - Form Fields:**
 - ENTER YOUR EMAIL: Input field with placeholder "Enter your email"
 - ENTER YOUR PHONE NUMBER: Input field with placeholder "Enter your phone number"
 - Buttons:** "SIGN ME UP" (orange), "Find out more in our [Privacy Policy](#)" (blue link)

Configuration Panel (SET UP):

- Signup Source:** banner.name
- Consent Categories:** (empty)
- Consent Management:** (dropdown menu)
- Update Customer Attributes:** yes
- Identify:** yes
- Identify Form Input:** email
- Identify Ids To Update:** registered
- FORM CONTENTS:**
 - Include Email:** yes
 - Pre Populate Email:** yes
 - Include Phone:** yes
 - Pre Populate Phone:** yes

💡 **Weblayers help you engage customers directly on your website at the right moment.**

They enable you to:

- Promote sign-ups, offers, and important messages
- Catch customers at key moments, including points of drop-off
- Continue customer journeys started in other channels (such as email or mobile)

7. Dashboards

- In the Menu bar, go to Overview -> My Dashboards -> Faceland overview Dashboard' (Linked [here](#)).
- This visual dashboard will give you an idea on the variety of reporting capabilities the analytics suite can provide. Each widget can be interacted with directly for campaign activation or further analysis and modification.
- In the upper right-hand corner, click the 'Edit' tab to access the editor.
- You can easily pull in new analyses from the left hand menu or resize and reorder the existing ones.
- For more info on all of our analytics, visit our [Analyses](#) documentation

💡 As a reminder, in addition to campaign reporting, Bloomreach can help uncover trends in your data, whether that's booking behaviour (which clinic is booked most often), web funnels (where users drop off in the booking process), or even insights such as how many appointments have been rescheduled.
